- Rotary volume control
- Audio activity indicator
- Keypad for PTT functions
- Supports foot switch PTT w/ channel latching feature
- Plug-n-Play
- Uses Standard "A-B" type USB Cable

Overview

The VM-10 is a multi-button USB audio and control device. The VM-10 was designed to integrate with any PC Based VoIP Platform where Multichannel Push to Talk may be required.

All buttons on the VM-10 transmit specific "Hot Key" sequences. These "Hot Keys" can be assigned to perform specific operations in a software VoIP application.

The VM-10 is 'plug n play' and allows mouse free operation of virtually any desktop VoIP software application. It also provides connectivity for external speakers and a footswitch.
