- Optional 1/8" stereo jack for footswitch connectivity
- Channel buttons provide "hot key" sequences, for mouse free operation
- Built-In Mono Amplified Speaker
- Plug-n-Play
- Speaker Volume Control

Overview

The VM-4 is a USB multi channel capable audio device which permits control for up to four channels of audio

The VM-4 is ideal for situations where a multi-channel, plug-n-play, desktop audio interface is needed. With virtually any USB compliant PC and 3rd part VoIP desktop application software, the VM-4 enables "mouse free" interaction with up to 4 channels of audio. Channel buttons provide "hot key" sequences to control channel PTT access for your VoIP application.

An RJ-25 port is provided for connecting an optional PTT handset or headset.
